

NEW

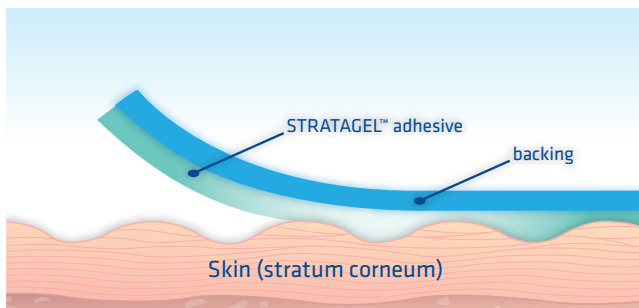

DEVELOPED FOR SENSITIVE SKIN!

A Breakthrough in Kinesiology Tape Products

SpiderTech Gentle, a new line of Kinesiology Tape Precut and Roll products using Nitto Denko's new Stratagel adhesive, scientifically formulated for sensitive and fragile skin. And, as with all SpiderTech Kinesiology Tape products, Gentle is latex-free, hypoallergenic, and uses the same high-grade breathable cotton material.

The SpiderTech Gentle Difference

Our standard SpiderTech products utilize a "solid" adhesive with a high level of adhesion, allowing the tape to adhere well to the upper surfaces of the skin. This can create some irritation to sensitive skin during wear or removal. With SpiderTech Gentle, the Stratagel™ adhesive conforms to the entire skin area, allowing its gentle adhesive to maintain grip without irritation during wear, and minimizes the amount of skin cells damaged during removal.

SpiderTech Gentle products use a gel-like, gentle adhesive that minimizes skin irritation without losing its grip.

INTRODUCING

KINESIOLOGY TAPE FOR EVEN THE MOST SENSITIVE SKIN

Why Use SpiderTech Gentle

- Great for patients with sensitive skin, including Geriatric and Pediatric applications
- Greatly reduces irritation
- Less discomfort with removal of tape or applications.
- Allows continuous applications without irritation

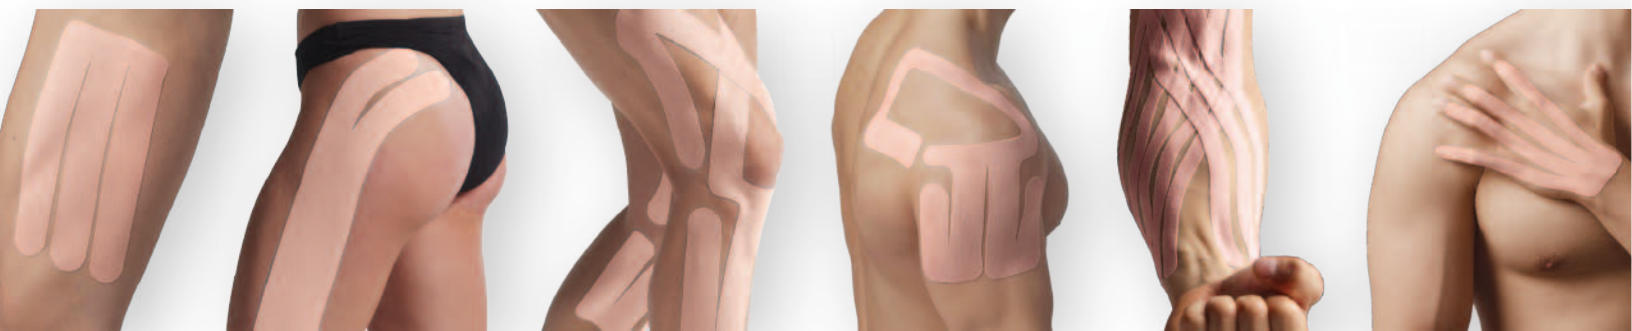

When Should You Choose Gentle?

SpiderTech Gentle

- Gentle adhesion during wear and removal
- Up to 3 days of application
- Recommended for fragile or sensitive skin
- Water resistant

SpiderTech Regular

- Maximum adhesion for extended periods of application
- Up to 5 days of application
- Recommended for general population
- Water resistant

SpiderTech Gentle is available in rolls and in our complete line of pre-cut products, making it the perfect addition to Geriatric and Pediatric-focused practices and facilities, and is excellent for use with patients that exhibit reactions to standard Kinesiology tape products, including those few that do react to our industry-leading hypoallergenic, acrylic adhesive-based SpiderTech Tape.
